**Proud to be partnering with the Best in Breed for Email Security**

**A new Partnership that can help you increase your email security for just a few dollars a month**

Despite the critical role email plays in day-to-day business, email servers typically are not protected by your firewall. Inbound email is passed through regardless of content, size, or address and is directed straight to your email server. This chaos costs individual businesses thousands of dollars in lost productivity, interruption of services, and underutilized or damaged systems. In addition, spam containing offensive material, such as pornography, can result in employee complaints and possible legal action. **Bald Eagle Technologies** realizes this and wants to help you.

### **Block Spam and Viruses before they hit your network**

**Bald Eagle Technologies** has partnered with Postini, now a Google company to help our customers with this problem. We can stop the spam, viruses and email attacks before they reach your network.

#### **Postini Perimeter Manager is:**

- **Accurate.** Postini's world-class heuristics and ensemble scoring engine captures up to 99% of all spam with false positive rates as low as 1 in 80,000 messages.
- **Reliable.** Backed by a 99.999% service level guarantee and 24x7 customer support.
- **Easy to Manage & Affordable.** Postini Email Security is so affordable that every business, from 1 to 1000 employees can deploy it for less than most of the other solutions available. Imagine setting up a solution that :
  - automatically scans for spam and viruses in your email stream,
  - updates itself automatically
  - Doesn't require you to install any software on your servers or client PCs.

### **SET IT & FORGET IT**

Postini Email Security is the closest thing to "set and forget" you will see in the current spam and virus filter market without spending thousands for a dedicated box and service subscription.
